Software engineer with 3 years' experience in an Agile environment. Primarily using Pega, a low-code OOP Java platform, to create & deliver applications throughout their lifecycle. Always keen to support and maintain ownership of applications by providing production support and QA when required. Interested in security engineering and completed a PGCert in Cybersecurity in spare time along with being involved in an application security project to automate Pega security checks.

Experience

SOFTWARE ENGINEER – Aflac NI

Jan 2020 – Present

Delivered first applications built from ground-up which automated the process of appeal claims. Responsibilities include:

- Early architecture of projects after analysis of the manual business processes, becoming a SME for the team on how the business/customer operates along with what we need to deliver. Refining, prioritising and tasking user stories for the team backlog based on customer feedback from sprint reviews.
- Developed key functionality along with incorporating non-functional requirements, namely security and usability.
- Worked closely with AppSec; through threat modelling identified application's assets to concentrate on what risks to highlight by applying mitigation controls.
- Encouraged team to apply security best practices throughout our SDLC.
- Delivered items by working independently and through pair-programming for more complex features.
- Overlooked deployment of code throughout environments in each sprint using CI/CD DevOps pipeline.
- Automation of user stories, writing robust unit tests along with UI tests in testing environment.
- Reading log files and debugging when production support is needed.
- Training and mentoring new team members.
- Building relationships with key stakeholders along with presenting and demoing application functionality to them; namely in sprint reviews or when US stakeholders visit the NI office.

Technologies used: Git, Pega, Pega CI/CD Pipelines, Power BI, Python, Robot Framework, Selenium, VS Code

Education

Queen's University, Belfast

Applied Cybersecurity PGCert with Commendation (66)

2021- 2022

Technologies used: Burp Suite, C++, Kali Linux, Wireshark

Software Development MSc with Commendation (61)
